<div class="df_qntext">Why is isofoam a good insulation material?

High resistance to heat flow i.e. low thermal conductivity. Isofoam retards heat flow into buildings in summer Isofoam keeps heat inside buildings during winter Heat Flow: Isofoam has a k-value of 0,024W/m²C (determined in accordance with ISO 8302:1991 (E) or ASTM C518) at 20°C mean temperature and 90 day aged.

<div class="df_qntext">Does isofoam increase k-value if exposed to air?

The k-value will increase with time when exposed to air and will also be influenced by water content Water: Isofoam will only absorb 0.32% (ISO 2896:1987) water and heat flow resistance will reduce by only 3% Pest: Isofoam is odourless, chemically inert and does not supply nutrition for pests, or support micro-organism growth.
